

*Pure Battery Technologies is a fast-growing company in the **EV industry**. We are based in Brisbane (Australia), supported by the **EIB (European Investment Bank)**, under German management, and specialize in the **environmentally friendly and sustainable refining and recycling** of valuable battery materials such as **nickel and cobalt**. For our planned factory extension at the Hagen site in Germany, our subsidiary **Königswarter and Ebell** is looking for an ambitious*

- Process Control Engineer (m/f/d)

*Who supports us in the implementation of our growth plans in the **E Mobility** as a key part of the project team and who will transition into our operations team*

Your perspectives:

- We offer you a secure position in a growing company that is investing heavily in the e-mobility industry.
- You will participate in the development of our company in Europe and shape its future.
- In this position you will work independently in a dynamic environment as part of a global team.
- In addition, we offer you an attractive compensation package.
- Diverse development opportunities available in an international company operating in a dynamic growing market.

With the growth plans of Pure Battery Technologies, an extensive plant expansion is planned at our factory in Hagen. Your new field of activity:

- Working in close cooperation with external consultants, suppliers and internally with the local operational team, the global technical team, to finalize the detailed design of the electrical measurement and control technology (E & IC) of the expansion project.
- Management and coordination of projects for control and automation technology, as well as further data processing.
- Preparation of planning documents for the control and automation technology.
- Assessment of E & IC technology as well as technical and commercial evaluation of incoming offers.
- Preparation of tender documents for supplies and services on the basis of valid standards, norms, and process engineering specifications.
- Technical guidance of the team and coordination of external companies/suppliers.
- Assistance to the team for procurement and permitting processes.
- Plant planning, including installation supervision and commissioning as part of the project team.

You will best fit with us if you have the following qualifications/experiences:

- Educated in the field of electrical engineering, automation, or industrial engineering as a graduate engineer / master's degree / bachelor's degree / state-certified technician. Experience in handling automation systems is an advantage (e.g. STEP 7-TIA Portal, PCS7).
- Professional experience in the above-mentioned field of activity is an advantage, but we also consider young engineers with first practical experience and great motivation in acquiring technical knowledge in a project.
- Experience in dealing with external engineering consultants, experts and/or construction contractors is beneficial.
- Understanding of German chemical plant standards and permitting is beneficial.
- You are reliable and have good communication skills in English / German, (written and spoken).
- You are collaborative and have a "hands-on" mentality.
- Your approach to work is proactive, systematic, results-oriented and flexible with strong focus on finding solutions.
- Always safe and put people first
